Overview of the 2023 Michelson Prizes: Next Generation Grants

**KEY DATES**

- Application portal opens: April 3, 2023
- Applications due: June 11, 2023, 11:59 pm EDT (UTC -4)
- Short-listed applicants notified: September 2023
- Supplementary information due: October 2023 (exact date to be communicated)
- Notice of award: December 2023
- Grant cycle: January 1 -- December 31, 2024

**Background**

The Michelson Medical Research Foundation (MMRF), together with the Human Immunome Project (formerly the Human Vaccines Project), established the Michelson Prizes: Next Generation Grants (Michelson Prizes) in 2017. This $20 million initiative supports early-career investigators who are using disruptive research concepts and inventive processes to significantly advance the discovery of vaccines and immunotherapies for major global diseases.

The 2023 Michelson Prizes are accepting applications related to Human Immunology and Vaccine Research, including research aimed at tackling the current roadblocks in human vaccine development and expanding our limited understanding of key immune processes that are fundamental to successful vaccine and immunotherapy development (e.g., immune memory, immune receptor recognition, tissue-specific responses, host-microbe interactions, underlying genetic mechanisms, genetic susceptibility, etc.).

The Michelson Prizes are intended to support individuals early in their careers who possess novel ideas with applications across diseases and who have significant potential to execute these ideas to affect transformative change in their respective fields. Research that incorporates multiplexed and non-traditional approaches from outside the fields of immunology and vaccinology and demonstrates a high degree of novelty and creative thinking is encouraged. The successful applicants will clearly articulate a vision that challenges current dogma and demonstrates an ability to look beyond convention to make a lasting impact on vaccine and immunotherapy research.

The Michelson Prizes seek to draw young investigators from a wide range of disciplines, including clinical research, biochemistry, molecular biology, protein engineering, computer science, artificial intelligence/machine learning, biophysics, nanotechnology, microbiome, tropical medicine, environmental health, etc.

Applicants must submit a 2-page description of their research proposal that will be judged based primarily on innovation and the ability to bring new insight and approaches to immunology and vaccine-
based research. Short-listed candidates will be invited to submit supplemental information to support the selection committee in making its final selection.

**Eligibility Information**

Applicants must be 35 or younger on June 11, 2023 (i.e., born June 12, 1987, or later). Early-career investigators, postdoctoral fellows, clinical fellows (including residents and interns), doctoral students and other researchers currently in training positions are eligible for these awards. An eligible applicant, regardless of ethnicity, nationality or citizenship status, must be employed by, or affiliated with, an eligible organization. Examples of eligible organizations include academia, biotechnology companies, foundations, government and non-governmental organizations, and research institutes. Individuals from such organizations, including organizations based outside of the US, are eligible to apply.

While the Michelson Prizes are focused on research outcomes in the field of vaccine and immunotherapy discovery, applicants from the full spectrum of related disciplines, including clinical research, biochemistry, molecular biology, protein engineering, computer science, artificial intelligence/machine learning, biophysics, nanotechnology, microbiome, tropical medicine, environmental health etc., are encouraged to apply. Prior experience in human immunology and/or vaccinology is not required; however, the application must clearly articulate how the proposed research will impact and advance our understanding of human immunology and/or vaccine science.

**Selection Process**

The Michelson Prizes use an online application. All communications, including the invitation to submit supplemental information, will be made through email – we encourage applicants to add the Survey Monkey email address (noreply@mail.smapply.net) to their whitelist or contacts list so emails don’t get stuck in spam.

**How to Submit an Online Application**

- Go to: https://michelsonprizes.smapply.org (or click the ‘apply now’ button @ www.humanimmunomeproject.org/michelson-prizes)
- Fill out the 2023 Michelson Prizes application forms, upload a 2-page description of your research project, and submit your completed application.
- Applications must contain all the information required in the form in order to be accepted.
- Applications must be submitted no later than June 11, 2023, 11:59 pm EDT (UTC -4)

**Application Review**

All applications will be reviewed by highly qualified scientists and clinicians with relevant expertise in the scientific subject areas. Applications will be evaluated based on innovation, impact and achievability. Each application will be evaluated for its own merit, independent of other applications. Unfortunately, we are unable to provide any feedback to applicants regarding the specific review of their applications. However, we will communicate with applicants once a decision has been reached.

The Human Immunome Project and MMRF acknowledge and support the fundamental roles that equity, diversity, and inclusion have in scientific endeavors. We seek applicants from all backgrounds and strive to ensure a fair and equitable process for the selection of Michelson Prize awardees. In order to avoid
bias, we blind all information regarding applicants’ names, gender, institution, ethnicity and citizenship during initial reviews.

Supplemental information
After the review of applications, short-listed candidates will be asked to submit supplemental information (note: this is by invitation only). We expect to communicate to all applicants by September 2023 the status of their application. If you are selected to submit supplemental information (including an expanded research plan, budget and letters of recommendation), you will receive an invitation email from the Human Immunome Project. Instructions on how to submit will be provided with the invitation, and applicants will have approximately one month to compile information.

All applicants will be notified by email in a timely manner of any changes in the deadline dates.

Award Announcement
Applicants will be notified of their selection to receive a Michelson Prize in December 2023. The award period commences on January 1, 2024, and ends on December 31, 2024.

Questions?
Please review our online Frequently Asked Questions first. For technical questions regarding the sm.apply platform, please use the ‘help’ function within the platform. For specific questions about eligibility or the application process, please email us at: michelsonprizes@immunomeproject.org

Research Conditions

The applicant must maintain a 50% dedication of his/her full-time professional effort during the award period to the research funded by this award. The applicant is expected to assemble a research team that will provide the necessary expertise and collaborative efforts toward accomplishing the research goals proposed in the application.

The allocation of award funds for the conduct of the Michelson Prize-funded project is under the control of the awardee and may be used flexibly for items such as salary, equipment, consumable supplies, travel to scientific meetings, and laboratory personnel working with the awardee. Specific limitations include the following: No more than 40% of the total award can be used for salaries without approval, travel costs cannot exceed $1500, and there is a $15,000 cap on equipment. The Human Immunome Project does not pay indirect costs on the Michelson Prizes.

It is the responsibility of the awardee, in conjunction with their institution, to ensure that all academic and research activities funded by this award and carried out in or outside the US comply with the laws or regulations of the US and/or of the foreign country in which the academic and/or research activities are conducted.

Research Involving Human Anatomical Substances, Human Subjects, or Human Cadavers
Research involving new and ongoing research with human anatomical substances, human subjects, or human cadavers must be reviewed and approved by the applicant's local Human Research Protection Office (HRPO), Institutional Review Board (IRB) or Ethics Committee (EC). Local IRB/EC approval at the time of submission is not required.
**Research Involving Animals**
Research involving new and ongoing research with animals must be reviewed and approved by the applicant's local Institutional Animal Care and Use Committee (IACUC) of record. IACUC approval at the time of submission is not required.

Specific documents related to the use of human subjects, human anatomical substances, human cadavers and/or animals in the proposed research may be requested if the applicant is selected for funding.

The MMRF and the Human Immunome Project intend that information, data, and research resources generated under awards funded by these prizes be made available to the research community and to the public at large in a timely manner via standard means of scientific communication, including publications and/or presentations in scientific forums. The MMRF and the Human Immunome Project will not retain any rights to published results or patents that result from research funded by these prizes.

The MMRF and the Human Immunome Project recognize that scientists in the early stages of their careers often switch institutions and will work with winners and their institutions to facilitate changes should that be necessary.

Award recipients are required to submit a final report and accounting of the use of funds at the conclusion of the award funding cycle. Any publications or works created by the award recipient must acknowledge support from the Michelson Prizes as follows: Author X and/or this research was supported by the Michelson Prizes Young Investigator Grants. Copies of journal articles and other publications that result from this research prize should be sent to the Human Immunome Project (a contact person will be provided).
